

Your facility has experienced significant results with Medline's VAPprevent Program. We look forward to continuing to work with you on preventing/reducing incidences of ventilator-associated pneumonia at your facility.

Based on the results of your report, we recommend you consider Medline's Pressure Ulcer Prevention Program or the Hand Hygiene Program. Like the VAPprevent Program, these are evidence-based solutions designed to improve quality and safety outcomes, increase patient satisfaction, and reduce errors.

Thank you for the opportunity to work with Facility Hospital to improve patient care and reduce costs. Please contact your program manager with any questions.
